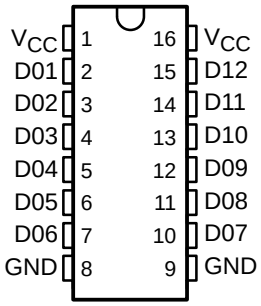
D, N, NS, OR PW PACKAGE
(TOP VIEW)



description/ordering information

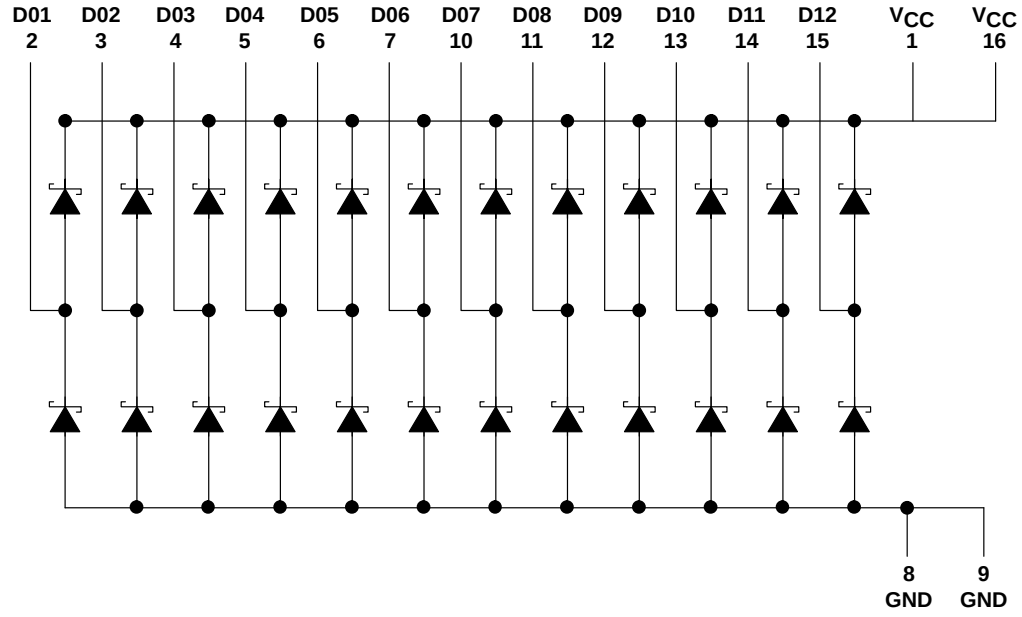
This Schottky barrier diode bus-termination array is designed to reduce reflection noise on memory bus lines. This device consists of a 12-bit high-speed Schottky diode array suitable for clamping to V_{CC} and/or GND.

ORDERING INFORMATION

T_A	PACKAGE†		ORDERABLE PART NUMBER	TOP-SIDE MARKING
0°C to 70°C	PDIP – N	Tube	SN74S1051N	SN74S1051N
	SOIC – D	Tube	SN74S1051D	S1051
		Tape and reel	SN74S1051DR	
	SOP – NS	Tape and reel	SN74S1051NSR	74S1051
	TSSOP – PW	Tape and reel	SN74S1051PWR	S1051

† Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

schematic diagrams



absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Steady-state reverse voltage, V_R . . . . . 7 V
Continuous forward current, I_F: Any D terminal from GND or to V_{CC} . . . . . 50 mA
Total through all GND or V_{CC} terminals . . . . . 170 mA
Repetitive peak forward current‡, I_{FRM}: Any D terminal from GND or V_{CC} . . . . . 200 mA
Total through all GND or V_{CC} terminals . . . . . 1 A
Package thermal impedance, θ_{JA} (see Note 1): D package . . . . . 73°C/W
N package . . . . . 67°C/W
NS package . . . . . 64°C/W
PW package . . . . . 108°C/W
Operating free-air temperature range . . . . . 0°C to 70°C
Storage temperature range, T_{stg} . . . . . –65°C to 150°C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

‡ These values apply for $t_w \leq 100$ µs, duty cycle ≤ 20%.

NOTE 1: The package thermal impedance is calculated in accordance with JESD 51-7.

electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

single-diode operation (see Note 2)

PARAMETER		TEST CONDITIONS		MIN	TYP§	MAX	UNIT
V_F	Static forward voltage	To V_{CC}	I_F = 18 mA		0.85	1.05	V
			I_F = 50 mA		1.05	1.3	
		From GND	I_F = 18 mA		0.75	0.95	
			I_F = 50 mA		0.95	1.2	
V_{FM}	Peak forward voltage		I_F = 200 mA		1.45		V
I_R	Static reverse current	To V_{CC}	V_R = 7 V			5	µA
		From GND				5	
C_t	Total capacitance	V_R = 0 V,	f = 1 MHz		8	16	pF
		V_R = 2 V,	f = 1 MHz		4	8	

§ All typical values are at V_{CC} = 5 V, T_A = 25°C.

NOTE 2: Test conditions and limits apply separately to each of the diodes. The diodes not under test are open-circuited during the measurement of these characteristics.

multiple-diode operation

PARAMETER		TEST CONDITIONS		MIN	TYP§	MAX	UNIT
I_X	Internal crosstalk current	Total I_F current = 1 A,	See Note 3		0.8	2	mA
		Total I_F current = 198 mA,	See Note 3		0.02	0.2	

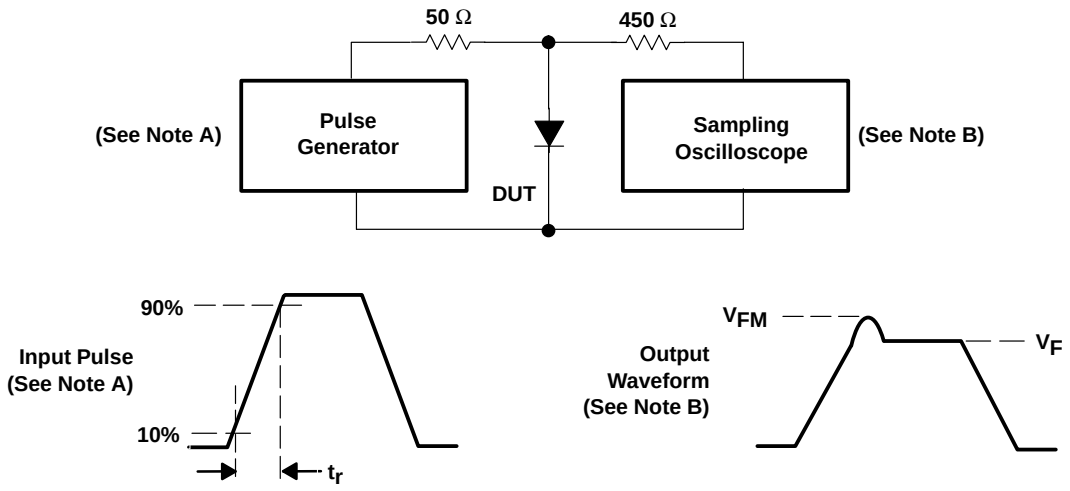
§ All typical values are at V_{CC} = 5 V, T_A = 25°C.

NOTE 3: I_X is measured under the following conditions with one diode static, all others switching:
Switching diodes: t_w = 100 µs, duty cycle = 20%
Static diode: V_R = 5 V
The static diode input current is the internal crosstalk current, I_X.

switching characteristics over recommended operating free-air temperature range (unless otherwise noted) (see Figures 1 and 2)

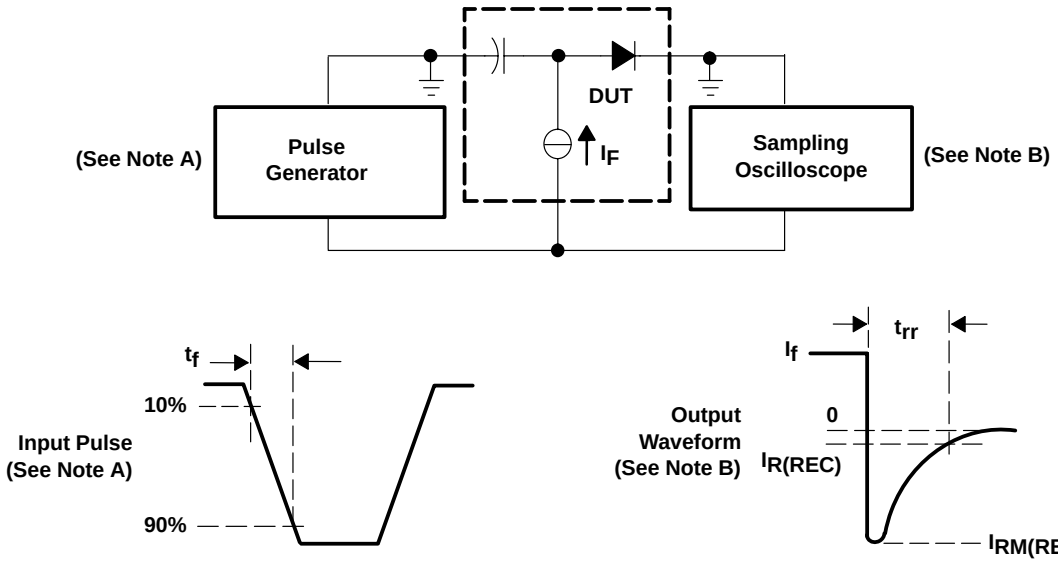
PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{rr}	Reverse recovery time	I_F = 10 mA, $I_{RM(REC)}$ = 10 mA, $I_{R(REC)}$ = 1 mA, R_L = 100 Ω		8	16	ns

PARAMETER MEASUREMENT INFORMATION



NOTES: A. The input pulse is supplied by a pulse generator having the following characteristics: t_r = 20 ns, Z_O = 50 Ω, freq = 500 Hz, duty cycle = 1%.
B. The output waveform is monitored by an oscilloscope having the following characteristics: $t_r \le 350$ ps, R_i = 50 Ω, $C_i \le 5$ pF.

Figure 1. Forward Recovery Voltage



NOTES: A. The input pulse is supplied by a pulse generator having the following characteristics: t_f = 0.5 ns, Z_O = 50 Ω, $t_W \ge 50$ ns, duty cycle = 1%.
B. The output waveform is monitored by an oscilloscope having the following characteristics: $t_r \le 350$ ps, R_i = 50 Ω, $C_i \le 5$ pF.

Figure 2. Reverse Recovery Time

APPLICATION INFORMATION

Large negative transients at the inputs of memory devices (DRAMs, SRAMs, EPROMs, etc.) or on the CLOCK lines of many clocked devices can result in improper operation of the devices. The SN74S1051 diode termination array helps suppress negative transients caused by transmission-line reflections, crosstalk, and switching noise.

Diode terminations have several advantages when compared to resistor termination schemes. Split-resistor or Thevenin-equivalent termination can cause a substantial increase in power consumption. The use of a single resistor to ground to terminate a line usually results in degradation of the output high level, resulting in reduced noise immunity. Series damping resistors placed on the outputs of the driver reduce negative transients, but they also can increase propagation delays down the line because a series resistor reduces the output drive capability of the driving device. Diode terminations have none of these drawbacks.

The operation of the diode arrays in reducing negative transients is explained in the following figures. The diode conducts current when the voltage reaches a negative value large enough for the diode to turn on. Suppression of negative transients is tracked by the current-voltage characteristic curve for that diode. Typical current-versus-voltage curves for the SN74S1051 are shown in Figures 3 and 4.

To illustrate how the diode arrays act to reduce negative transients at the end of a transmission line, the test setup in Figure 5 was evaluated. The resulting waveforms with and without the diode are shown in Figure 6.

The maximum effectiveness of the diode arrays in suppressing negative transients occurs when the diode arrays are placed at the end of a line and/or the end of a long stub branching off a main transmission line. The diodes can also reduce the negative transients that occur due to discontinuities in the middle of a line. An example of this is a slot in a backplane that is provided for an add-on card.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.
